

ENVIRONMENT & SUSTAINABILITY

In support of Doolan’s Heavy Haulage beliefs and values, and in acknowledgement of the expectations of the community, customers, authorities, employees, and management, Doolan’s Heavy Haulage is committed to operating in a sustainable and environmentally responsible manner.

The company’s activities are conducted in compliance with all environmental legislation and relevant requirements, with a focus on continual improvement and long-term environmental sustainability. In recognition of our commitment to achieving a high standard of environmental care, the company pledges to conserve resources, minimise waste, reduce emissions, and prevent pollution as part of our everyday operations across sites in Victoria and Western Australia.

In working towards these goals, environmental responsibilities are integrated into our Environmental Management System (EMS), which is aligned with the principles and requirements of ISO 14001. We aim not only to meet our environmental obligations but also to run our operations in a more sustainable way that reduces our impact on the environment.

The success of our environmental and sustainability efforts depends on the active engagement and awareness of all employees. We ensure our workers are informed of the company’s environmental goals and understand what they need to do to help protect the environment and support sustainability.

We are committed to open and transparent communication with government bodies, local communities, and other stakeholders regarding environmental and sustainability matters.

Our Environmental Policy is available to all interested parties, including customers, suppliers, contractors, and neighbours, and reflects our commitment to sustainability.

The Environmental Management System (EMS) is regularly reviewed to ensure the ongoing effectiveness of our sustainability efforts and to reduce our environmental impacts over time.

Signed: Warwick Doolan, Managing Director
